

MiniWar Whitepaper For NFT Token and Game

/Background

Based on the rapid development and maturity of blockchain NFT projects, there have not been too many outstanding NFT themed token systems on the market. In order to promote and promote the development of the blockchain project NFT again, MiniWar came into being in this context.

/Purpose

To make a more exquisite, more complete and better NFT project, and to promote the sustainable and healthy development of the NFT project industry, to create a Binance Smart Chain value NFT cards worth buying and collecting by the majority of blockchain players.

/MiniWar Token Economics

Token owners can purchase 4 different dragon eggs at the opening of the market, open and obtain our different excellent IP, The private equity owner is 1.3 times at the opening of the market, and can immediately purchase a limited amount of dragon eggs and trade dragon eggs or tokens.

Buy eggs 95% return, 5% marketing wallet, each transaction charges 5% handling fee, of which 3% return, 2% dividend BTC. Token 10% plus pool 13% private sale 2% operation 2% airdrop 53% black hole 20% contract address follow-up game output.

MiniWar Token Economics

/NFT

Diversified NFTs are available for you to explore and discover. Different NFTs have different attributes and skills, and you will have different feelings and experiences when you use them. We divide NFT into different stars, namely four different stars: one-star, two-star, three-star, and four-star. Every three NFTs with the same star rating can be combined into the next higher-level NFT, but a certain fee is required.

By extending blockchain-authenticated NFTs and fusing them with other things, MiniWar has given birth to a new type of NFT experiential, exclusive and with an expanding intrinsic value. NFTs include the right to enjoy exclusive experiences with the creators. With NFTs, MiniWar is opening the door to unprecedented levels of gamer interactions and experiences that are in high demand among legions of empowered fans.

As the wider NFT space continues to evolve, Olyseum will bring NFTs to life, making them more accessible and relatable to fans worldwide, with MiniWar as the leading venue where fans and game interact closer than ever before. By linking experiences to NFTs, Olyseum will have created a robust bridge between the digital crypto world and the millions of users who will want to live those experiences. The confluence of these separate audiences will be transformative for the wider crypto for adoption, a backdoor that will bring large swathes of users to this new ecosystem where they can use their digital utilities and identities, NFTs and tokens.

/Smart Contract Validation

---Growing Vault: Value by trading it

Every time the NFT transfers ownership, a part of the transaction is intrinsically absorbed into the NFT smart contract itself. This maintains an internal balance that keeps growing in value (as the token velocity increases) making the NFT worth more.

To liberate the balance locked within, the current owner would have to burn the NFT. This way, the better our NFTs are, the more value they will hold MiniWar and the less tokens will be freely circulating as supply. For every transaction, a percentage is converted into MiniWar tokens and proportionally distributed to the star and to the MiniWar token burning mechanism for periodic burning. This distribution is segmented as follows:

- A percentage remains in the smart contract, so the NFT value will be growing.

/Reach: Promote with the Best

NFTs provide an excellent window of opportunity for holders to leverage the reach and magnetism of stars for the purposes of product placement during interactions — greatly broadening the accessibility of tier-one promotional activities. The far-reaching benefits of product placement alongside stars would be substantial in terms of strengthening brand awareness, elevating product reputation and opening new potential sales channels. This represents a democratisation of celebrity promotions.

Suppose a start-up is looking for innovative and eye-catching ways to advertise their young product. Buying an NFT would open the door to a potentially game-changing product placement opportunity, in which the designated star would be seen alongside the brand via social media posts or during a recorded interaction. The seamless integration of the start-up's product into the experience would add an undisputed layer of star-power to boost brand recognition. MiniWar will work with the brands and startups buying the NFT loaded with star reach, to integrate MiniWar with their business models. In turn, this will strengthen MiniWar adoption through other systems.

/Experiences Real-Life Connection

In the era of heightened experiential marketing, consumers are demanding more from brands in terms of real-life engagement, tailored experiences, and memorable moments. Alongside this, the proliferation of tech solutions and social media platforms has provided fans with unprecedented visibility over their favourite stars' activities. However, the experiential chasm has yet to be bridged, until now.

MiniWar, with the launch of its NFT platform, wants to greatly broaden the accessibility of star experiences, elevate fans' relationships with brands, while creating a venue for genuine moments between stars and fans — moments that resonate, moments that inspire, moments that capture the imagination.

/Main Uses of MiniWar

The MiniWar token can be purchased and sold via a range of crypto wallets (such as TokenPocket), on decentralized exchanges (such as Pancakeswap), and on a growing number of centralized exchanges.

/Rewards :Encouraging Engagement

Showcase your NFTs and gamify them through collections. Holders of complete collections will be eligible to access exclusive private auctions. Monetize user engagement and let your fan base earn rewards. Irrespective if stars created the NFT in MiniWar or externally, they can enrich the NFT and transform it into an NFT to earn extra rewards.

/NFTs are enriched

We have a variety of NFT cards, including 9 one-star cards, 12 two-star cards, 15 three-star cards, and 30 four-star cards; and each has a certain number, and each has its own different levels, to play against different players. Can get experience or token rewards.

/Competitive Advantages

While MiniWar is in a preproduct phase, it is of the utmost importance to focus on collecting exclusive IPs as progress is made behind the scenes. The preproduct phase is highly focused on communication with early adopters and keeping them abreast of major updates and developments. The people who are most interested in this preproduct phase are early adopters in the crypto world.

/Competitive Advantages

These early adopters will likely participate in NFT sales that take place on our platform or third party platforms or simply purchase MiniWar for its increasing utilities. They are unlikely to be MiniWar's late stage power users but will act as initial multipliers to draw attention to MiniWar in the subsequent phase. This audience requires no introduction to the crypto world. As the word spreads through publications and word of mouth, they will be poised to accumulate MiniWar as it becomes widely available on centralized exchanges. They yearn for the first mover's advantage.

/Competitive Advantages

A minimal advertising budget would be spent on attracting potential MiniWar holders through Twitter, Dextools, crypto influencers and others that can reach this demographic.

Our NFTs are all original and have spent a lot of effort. They are beautifully made and have a beautiful style. They are rare cartoon NFTs.

/Go to Market Strategy

-Generating Demand

Our go to market strategy is based on an agile Product Market Fit approach. This means MiniWarhas to build a product tailored to each target audience, to the stage that best suits MiniWar as a company at that time, and market that specific product rather than forecasting the end goal. As the company and the features grow, the target audience will naturally evolve.

/Mystery Cards

When the number of NFT owners reaches 500, we will randomly select a Samsung NFT owner and send 1 million tokens as a lucky reward. Premium NFTs are naturally highly solicited and thus implicitly have a high price. To broaden the accessibility and ensure that anyone has a shot at getting the most prized NFTs, some of them will be hidden in NFT packs. Additionally, to increase the value of Mystery Cards and increase the likelihood of selling a NFT for renters which are listed on the marketplace, MiniWar may algorithmically incorporate them into the Mystery Card packs, consequently increasing our margins.
